

YOUR MISSING INGREDIENT

The experience and insight of our process engineers is the ingredient you've been looking for.

LEE INDUSTRIES

Processing Perfection.™

Processing Perfection.

Processing Perfection means we're not happy until you are. It means we'll apply decades of innovation and experience—or we'll invent a whole new approach—to get your product right. Then we'll show you how to repeat those results with exacting precision in every batch.

Let us show you how we can deliver world-class process equipment, engineered to make your product perfect every time.

OUR PROCESS STARTS WITH YOUR PROCESS.

What you see is what you get with the quality cosmetic processing solutions provided by Lee – and we think you'll like what you see. You can rely on the experts at Lee to meet the challenges of the cosmetic industry.

No manufacturer has more experience and knowledge about process engineering than Lee Industries.

Consultation

We start by offering a process optimization evaluation to assess your current situation and look for hidden inefficiencies. Then we use that insight through every phase of your project.

Applications Engineering

Develop a conceptual design that can help to improve your process by providing solutions to mixing and compounding challenges.

Developmental Engineering

Move from concept to a detailed specification with the confidence that your schedule and budget are locked in.

Design Engineering

Create a blueprint and approve design as you review the vessel and discuss any necessary changes to ensure that you get the best equipment for your processing needs.

Manufacturing Engineering

Build your custom-designed process equipment with an elite team of craftsmen who understand your application for the vessel.

Testing

Meet validation and equipment acceptance requirements with a stand-alone Factory Acceptance Testing (F.A.T.) facility.

Kettles

Tanks

Vacuum Pans

Agitators

Cooker Coolers

High-Shear Mixers

Fluid Transfer

Mixers

Blenders

Proven Consistency

While the cosmetic industry is built on effectively covering things up – blemishes, odors, and graying hair, just to name a few – transparency and clarity are critically important for the processing of its products.

With decades of innovation and experience engineering custom cosmetic processing solutions, Lee is the partner you can trust for all your process equipment needs.

Lee caters to the cosmetic industry with solutions supporting batch sizes both big and small for popular products like lipstick, mascara, nail polish, cologne, skin cream, and hair coloring. We know consistency is a critical component of your product, so we make a fully equipped state-of-the-art laboratory testing facility available to our customers.

Our ability to design vessels that accommodate pre-existing layouts with doorway and room size limitations means your equipment will be custom-built – and perfect – for your facility.

Lee offers heavy-duty USDA-approved agitators and high-shear mixers, along with uniflow coil jackets that assure a consistent thermal flow and a larger surface for heat transfer. And with ASME certification, CE-marking capabilities and Canadian registration, you can be confident in the quality of Lee's equipment.

In the event you do need repairs, an experienced ASME-certified field service department is available to limit downtime in your production.
