

YOUR MISSING INGREDIENT

The experience and insight of our process engineers is the ingredient you've been looking for.

LEE INDUSTRIES

Processing Perfection.™

Processing Perfection.

Processing Perfection means we're not happy until you are. It means we'll apply decades of innovation and experience—or we'll invent a whole new approach—to get your product right. Then we'll show you how to repeat those results with exacting precision in every batch.

Let us show you how we can deliver world-class process equipment, engineered to make your product perfect every time.

OUR PROCESS STARTS WITH YOUR PROCESS.

Our pets don't have a say in the products given to them, but your customers do. When you're focused on manufacturing pet products good enough to give to your own pet, you should partner with Lee. You can rely on the experts at Lee to meet the challenges of the animal food and health industry.

The worldwide leader of process equipment
in the animal food and health industry.

No manufacturer has more experience and knowledge about process engineering than Lee Industries.

Consultation

We start by offering a process optimization evaluation to assess your current situation and look for hidden inefficiencies. Then we use that insight through every phase of your project.

Applications Engineering

Develop a conceptual design that can help to improve your process by providing solutions to mixing and compounding challenges.

Developmental Engineering

Move from concept to a detailed specification with the confidence that your schedule and budget are locked in.

Design Engineering

Create a blueprint and approve design as you review the vessel and discuss any necessary changes to ensure that you get the best equipment for your processing needs.

Manufacturing Engineering

Build your custom-designed process equipment with an elite team of craftsmen who understand your application for the vessel.

Testing

Meet validation and equipment acceptance requirements with a stand-alone Factory Acceptance Testing (F.A.T.) facility.

Kettles

Tanks

Vacuum Pans

Agitators

Cooker Coolers

High-Shear Mixers

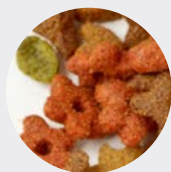

Fluid Transfer

Mixers

Blenders

Proven Consistency

Surveys show that pet owners often consider their furry friend to be more like family, which is why they expect nothing less than the best for their pets. If your customers won't settle, why would you?

With decades of innovation and experience in engineering custom processing solutions for animal food and health products, Lee provides consultation, design, and fabrication of the complete system your product or process dictates.

Lee's extensive knowledge in batching techniques and methods allows us to cater to the animal food and health processing industry with solutions supporting batch sizes both big and small. Popular animal products that businesses like yours produce, including wet and dry food, skin and hair care, medical ointments and creams, and injectable medicine are regularly processed using our equipment. And because we know consistency is a critical

component of your business, we make a fully equipped, state-of-the-art laboratory testing facility available to our customers.

Our ability to design vessels that accommodate pre-existing layouts with doorway and room size limitations means your equipment will be custom-built – and perfect – for your facility.

Lee offers heavy-duty USDA-approved agitators and high-shear mixers, along with uniflow coil jackets that assure a consistent thermal flow and a larger surface for heat transfer. Plus, our complete line of 3A/USDA-approved sanitary valves will meet your needs for cleanliness.

With ASME certification, CE-marking capabilities and Canadian registration, you can be confident in the quality of Lee's equipment. In the event that you do need repairs, an experienced ASME-certified field service department is available to limit downtime in your production.
